

Announcement Date: August 16, 2011

This announcement applies to Teleform 10.5 only.

Autonomy has made available, and Infotek has tested version 10.5 build 10549 of the Cardiff Teleform product suite. The details of the Release Notes are attached. Infotek has only sanity tested this release for core functionality and has not performed full regression testing on all functions. Customers are encouraged to follow a testing and deployment plan appropriate for their environment.

The release is available thru the Autonomy ESD site, as well as thru Infotek. Contact us if you have any questions.

Infotek Testing Notes:

- “Over the top” install on your current Teleform License Server.
- Clients are prompted to upgrade to a newer version the next time a module is launched.
- Appears to retain all system config, job settings, form & exports, and WCO settings.
- All Reader items functioned: OCR, Auto Batch Create, evals/exports, etc.
- WCO is a separate install performed on your WCO server(s).
- Don’t forget to install all of the documentation on 1+ workstations (script help, etc).
- Infotek’s test environment included one 2003 License & File Server, one XP SP3 Reader, one XP SP3 & one Win7 Scan/Verifier stations, one 2008 R2 server running SQL 2008 and WCO/IIS.
- Imports tested successfully to AX 6.5 and AX 6.5 Patch 1 as well as to network paths.
- This was released May 2011 but not widely advertised. It has resolved scripting & unhandled exception errors in some environments.
- It has been stress tested over 10,000 pages in Scan Station, Verifier, and Reader without issue.

**Teleform 10.5 (Build 10549): will contain one ZIP file. Extract that to your License Server. Stop all Teleform activity/services and install on License Server.**
